

LOW COST CALLS AND LINE RENTAL

On Telecom offers a fully-integrated service for both low cost fixed line calls and your line rental, all on one bill.

Now there is no need to have a separate BT bill as

we will provide you with a single bill and a service that will offer you:

- ⌚ significantly lower charges
- ⌚ reduced administration costs
- ⌚ full management reporting
- ⌚ itemised and cost centre billing
- ⌚ the ability to access information online and in real time

On Telecom offers Carrier Pre-Selection and direct access connectivity and can provide new lines or transfer all your current line rental charges for analogue, ISDN 2 and ISDN 30 lines.

Carrier Pre-Selection

Carrier Pre-Selection (CPS) routes customers' calls onto a high quality alternative network to BT without the need for installing special routers or prefixing calls with a PIN code.

With CPS, the local BT exchange is programmed to recognise automatically that calls from a particular line need to be routed via an alternative supplier.

What are the benefits of CPS?

Principally, CPS provides you with significant savings on your landline calls with competitive discounts for high volume use.

Switching to CPS is easy and our highly experienced provisioning team will ensure the following:

- ⌚ competitive tariffs offering significant savings over BT and other carrier networks
- ⌚ guaranteed high quality service over Tier 1 networks

- ⌚ no expensive diallers or PBX reprogramming or the need to prefix calls with a code

- ⌚ no new line required or change of number on a transferred line

- ⌚ all extensions will be covered so there will be no 'leakage' back to BT that could incur higher call charges

- ⌚ optional lower cost business line rental package

- ⌚ one fully-itemised bill for all your telecoms services and detailed management reports supporting full cost centre billing

- ⌚ no hidden charges or call set up fees

- ⌚ call-by-call override facility to allow you to make calls on other companies' networks, including BT, providing full service redundancy

- ⌚ alternative indirect access using 4-digit number still available for multi account billing

- ⌚ Ten day 'cooling off' period after signing, should you change your mind

- ⌚ no installation costs, no connection or disconnection charges

We take away the headache of managing your day to day business communications

Direct access

For larger corporate users, a direct access service is available through the installation of a direct connection from your premises via our Tier 1 network and cable providers.

Lower cost per minute charges and lower line rentals than BT based services are achieved.

What are the benefits of transferred line rental?

When we take over the management of your BT line, you will have the peace of mind in knowing that you will benefit from:

- ⌚ lower rental fees
- ⌚ a complete set of network features similar to those offered by BT
- ⌚ a full and responsive maintenance service with lower charges

Analogue

Single or multi-line analogue lines can be installed as new or transferred lines from BT. Line rental is lower, we offer a similar feature set to BT and the transfer of your telephone service is quick and seamless.

ISDN Digital

ISDN is a completely digital telecommunications network for high-speed transmission of voice and data, using the standard analogue telephone lines that are present in most homes and business premises.

The two most popular options available are:

- ⌚ ISDN2, providing a maximum of 2 x 64 kbps channels. These can be used separately for voice and data or as one 128 kbps high-speed data channel
- ⌚ ISDN30, providing a minimum of 8 x 64 kbps digital channels up to a maximum of 30 channels per 2 Mbit bearer.

What are the benefits of a digital service?

A digital service supplies you with greater capacity, normally using existing infrastructure installed at your premises. This provides you with:

- ⌚ greater capacity for more callers to use the same telephone line to make calls
- ⌚ fast data speeds to ensure cost-effective data connectivity for internet access, file transfer and email
- ⌚ call charges only being incurred when the line is in active use
- ⌚ digital select services such as call barring, forwarding and conference calling providing you with enhanced control and flexibility
- ⌚ a cost-effective alternative for any business requiring high-speed data transfer where an ADSL broadband service is not available

What else does On Telecom offer?

As a communication service provider offering a 'one-stop-shop', we can provide you with a real opportunity to integrate your fixed and mobile services to increase the efficiency and reduce the overall cost of all your communication services.

On Telecom can offer you:

- ⌚ fixed line calls and line rental
- ⌚ non-geographic numbers
- ⌚ private circuits(Ethernet) and WAN solutions
- ⌚ mobile data solutions
- ⌚ DSL internet connectivity
- ⌚ dedicated internet connectivity
- ⌚ Telephone systems and networking hardware
